PRODUCT BULLETIN

Product Description

UNI-TINT is a colour tint pack consisting of a proprietary blend of pigments designed to be added to Unicon Concrete solvent based concrete sealers to produce a solid/opaque coloured sealer coating. When mixed and applied to a properly prepared concrete surface it provides a coloured alternative to clear sealers.

Uses

Use UNI-TINT to achieve a coloured alternative to clear solvent based concrete sealers. UNI-TINT can be applied to hand troweled, broom finished, stamped or exposed aggregate concrete surfaces. Any surface suitable to receive a solvent based sealer is suitable for UNI-TINT.

Mix well then pour one container of UNI-TINT into one 18.93L pail of solvent based acrylic sealer. Rinse container with sealer to ensure all pigment is used. Pour contents back into sealer and mix using a mixing paddle or a cordless drill and a jiffy mixer for 1 – 2 minutes. Stir frequently. Apply sealer using sealer application instructions.

Advantages

UNI-TINT allows the user to benefit from all of the properties of a solvent based sealer but allows the ability to add colour to the surface. Available in: Victorian Red, Walnut, Black, White, Light Grey & Dark Grey.

Limitations

As with any coloured product it is recommended to apply to a small inconspicuous area to determine if the desired look will be achieved.

Caution

This product contains organic solvents that may cause injuries to eyes, skin and lungs. Harmful if swallowed. Always use PPE when working with Chemicals. Flammable material exterior use only.

First Aid Treatment

Consult SDS for more information.
